EXPERIENCE

Full Stack Developer at Famex Trade Associates Ltd

Jan 2024 - Present

- **Single-handedly design and development** of a new job portal platform, ensuring seamless integration between the user interface and the product database. This resulted in a 15% increase in conversion rate.

- **Independently optimized the performance** by implementing caching techniques and code refactoring. This led to a 20% reduction in page load times, improving user experience and satisfaction.

SELECTED PROJECTS

Dev Overflow - A Problem Solving Community

GitHub *Livesite*

Developed a comprehensive problem-solving platform for programmers.

- **Increased user engagement by 20%** through features like user recommendations, global database search, and interactive data listings.

- **Enhanced user experience** with features like up/down voting for questions and answers, a reputation system, and a badge system.

- Implemented cutting-edge AI functionalities for generating answers to user queries. Optimized platform performance by tracking page views

Jobi - Find and Hire Experts

GitHub *Livesite*

A streamlined platform to connect businesses with top professionals, making hiring simple and efficient.

- Implement secure user authentication and authorization mechanisms.

- Simplified the expert hiring process by implementing intuitive tools, **resulting in a 15% faster and more efficient talent acquisition**

- Scalable Architecture: Built with scalability in mind to handle growing demands of your business.
